

PluginCatpath

This plugin inserts the full category path for each category that the current wiki page belongs to.

```
{CATPATH(  
    divider=>string          #string that separates the categories, defaults to '>'  
    top=>yes|no              #to display the TOP category or not, defaults to 'no'  
    )}  
{CATPATH}
```

Example

```
{CATPATH(divider=>|,top=>yes)}  
{CATPATH}
```

creates this output:

[TOP](#) | [feature_\(need_revision\)](#) | [Wiki & html pages](#) | [WikiPlugins](#)
