

# PluginTOOLTIP

**Insert a link with a tooltip onto a wiki page. Put the text for the link in between the tags.** This uses the OverLib feature already in Tiki that gives us the user info popups.

**For example:**

```
{TOOLTIP(url=http://TikiMODS.com, msg=This is the Tooltip text!, target=blank)}TikiMODS{TOOLTIP}
```

See also [PluginTT](#) for a different version of this plugin that accepts the = sign in the URL.

See it in action [HERE](#)

Let me know which you like better, [PluginTOOLTIP](#) or [PluginTT](#).
