1.8.2 addresses some security problems in Tikiwiki mainly Path Disclosure, XSS and improved CSRF routines (thanks to http://gulftech.org)

SF Reported Bugs

- Fix compatability with MSSQL

Fixes

- categories display with IE Damian
- width of all admin screens by adding a missing class to CSS Damian
- query in integrator lib had extra parameter Damian
- replaced obsolete module-title.tpl with module.tpl in simple style (when modcontrols set on) luci
- fixed article_image that was failing to display mose
- fixed hotwords parsing so it avoids hotwording in description that are used as url labels in wiki pages mose

Improvements

- Blended the *tree* class into all themes Damian
- Improved spacing on tiki-removepage.tpl Damian
- added an option in wiki admin panel to make use of dashes and underscores optional in WikiWords mose

Added 1.8.1 (CVS) to header and installer for identification of users running tar release or developers code. Will help with identification of problems on releases. Damian

The following points are also still pending a suitable fix.

- Editing a template adds multiple \ in front of " or ' each time you hit 'save'
- Bug with articles: if article length is 0, you cannot add a comment
- TikiWikifier (if html glossary is fixed ❌
- Fix Backup feature - *(seems to be related to the password enc Damian)*
- Dumps
- Tiki Live Support
- 907851 Article form doesn't account for article type selection
- Articles: missing pagination to older articles i.e.: Page: 1/2
- Accent problem in CatPath

- Bug with articles plugin, always shows 0 comments for all articles even if comments have been added.
- Compare function in history whilst using articles plugin
