

UserPagerIpowell

Hello, everybody.

I just started using Tiki.

My presence as a developer is motivated by two things:

1. Tiki has an amazing feature set.
2. My users **require** being able to have spaces and ' and . in page names and user names and such.

Since ', in particular, still hits a lot of errors until all the queries are moved over, well, it's my second day using Tiki, and I just submitted my 4th patch. 8)

Our Tiki, such as it is, is at <http://www.lojban.org/tiki/>

I can be reached at rlpowell@lojban.org
