- <http://tiki.bigbluebutton.org/playback/slides/playback.html?meetingId=d559965849921585c1849af03b7a51638700d979-1361472957396>

# When

Thursday, February 21, 2013 at 19:00:00 UTC time ([click for time zone in your city](#))

# What

See [Webinars](#) for a detailed description.

# Where

<http://live.tiki.org>

# Topics

# 1st hour quick news

- Explain the rationale for the new Webinar format
- Should we ask for a conference call with SF about [Migrate to Allura](#)? (Jyhem will follow-up with SF)
- 2013-02-05: Pascal, Marc, Alain, Duane and Nick met Fred and the BBB Team in Ottawa. The upcoming version is looking very good. We agreed to organize a TikiFest BigBlueButton in June 2013, and make use of all the new features
- Quick report on [TikiFestMuskoka](#)
  - Introduce [show.tiki.org](#)
    - Karen asks: "quick question: do we still want the 'perpetual' showcase Tikis I've made available @ <http://tikishow.kstingel.com?> "
    - Until the new infra is ready, yes please.
- [CKEditor4](#) has been added to trunk
- (add any topics here)

# Second hour, longer topics

- Discussion about [CKEditor4](#)

# Chat log

**Karen Stingel:** Hi Geoff

**Marc Laporte:** Hi everyone!

**Karen Stingel:** Hi Marc

**Geoff Brickell:** evening all

**Geoff Brickell:** or afternoon 🚫

**Karen Stingel:** what about morning Geoff? it's 5 AM tomorrow here

**Jean-Marc Libs:** evening!

**Marc Laporte:**<https://tiki.org/February+2013+Webinar>

**Daniel Gauthier:** Hello all. I'm in listening mode

**luciash d' being:** +1

**luciash d' being:** from me

**Karen Stingel:** +5

**Daniel Gauthier:** +1

**Geoff Brickell:** +1

**luciash d' being:** btw, do you also get some audio loss ?

**luciash d' being:** bits here and there

**Jean-Marc Libs:** I like it, especially as I need to leave in an hour 🚫

**Karen Stingel:** I seem to be getting a little, I just turned up headphones

**Geoff Brickell:** sound is good fro me

**luciash d' being:** great

**Karen Stingel:** quick question: do we still want the 'perpetual' showcase Tikis I've made available @<http://tikishow.kstingel.com?>

**Marc Laporte:** Karen: ok, I will add to the list for later

**Karen Stingel:** np ☒

**Karen Stingel:** nope, can't hear a thing ;)

**luciash d' being:** i haven't seen any Allura problem so far recently

**Marc Laporte:** Jyhem: +1

**luciash d' being:** Jean-Marc: just use http

**luciash d' being:** instead https

**luciash d' being:** but it is not asking me for sf password anymore anyway, just needed it to insert once and now it somehow remembers

**luciash d' being:** i did several commits already and no ask for password

**luciash d' being:** \*several

**luciash d' being:** http does not need any password - it is just checkout - one way

**luciash d' being:** no commit access

**luciash d' being:** i mean if you are just updating some sites, you should not need commit access there

**luciash d' being:** so http is fine

**Karen Stingel:** to update via SVN to a live server, you only need http access

**Karen Stingel:** you only need https when accessing to commit fixes and stuff

**Marc Laporte:** <https://tiki.org/Migrate+to+Allura>

**luciash d' being:** works for me so i do not need to contact SF to discuss Allura ;)

**Jean-Marc Libs:** For the record: The one that works for me consistently is the following:

**Jean-Marc Libs:** `svn switch --relocate https://tikiwiki.svn.sourceforge.net/svnroot/tikiwiki/branches/6.x https://svn.code.sf.net/p/tikiwiki/code/branches/6.x .`

**Jean-Marc Libs:** (note the '.' at the end

**Jean-Marc Libs:** )

**luciash d' being:** yay !

**luciash d' being:** kill that Flash ! ☒

**Marc Laporte:** <http://www.bigbluebutton.org/blog/>

**Karen Stingel:** luciash: +100

**Jean-Marc Libs:** /me hopes nobody uses IE6 any more ☒

**luciash d' being:** anybody here logged in to BBB with IE6 ? ;)

**Karen Stingel:** Chrome here (FF fights it)

**Guest: omstefanov:** Chrome here too

**luciash d' being:** FF Win 7 here

**luciash d' being:** (it is just quicker than my favorite Linux box ;))

**Jean-Marc Libs:** \o/ etherpad functionality !!! ❌

**Geoff Brickell:** FF XP here

**Arild Berg:** Hi everybody

**Marc Laporte:** Quick report on TikiFestMuskoka

**Marc Laporte:** <http://tiki.org/TikiFestMuskoka>

**Marc Laporte:**<http://tiki.org/Admins+Team#Essentials>

**Jean-Marc Libs:** and let's make sure the list remains short ❌

**Marc Laporte:** <http://tiki.org/Teams>

**Nelson:** Hi Everybody, I have a sore throat today so resting my voice. Will be typing more than talking ❌

**luciash d' being:** hi Nelson !

**Greg Martin:** Good thinking there Marc, et al

**Jonny Bradley:** all sounds good Marc, thanks

**luciash d' being:** why there is no Join/Leave button for Quality, Security and Legal team ?

**Marc Laporte:** <http://info.tiki.org/Featured+Tikis>

**Karen Stingel:** luciash: because we don't want you to leave?

**Marc Laporte:** <http://tiki.org/Consulting+Team>

**luciash d' being:** Karen: lol

**Nelson:** Yes Geoff, since you are one of the more prominent consultants, esp across the atlantic would be great to have your input and participation

**Marc Laporte:** Nelson: can you explain <http://tiki.org/show.tiki.org> next

**Nelson:** My throat is really bad today

**Jean-Marc Libs:** admin & security have mailing-lists

**Jean-Marc Libs:** not sure people can send mails to them

**luciash d' being:** Jean-MArc: i think they are not mailing lists, just aliases/forwarders distributed to several people

**luciash d' being:** ppl can send mail to the address

**Nelson:** Also, the whole bug reproduction process, whether release or not is not easy to do a lot of time.

**luciash d' being:** /me trying catch up to stay up-to-date at all his tiki instances maintained :-p

**luciash d' being:** i thought quick way to create bug reproduce/test profile would be great

**luciash d' being:** via tiki profiles i thought, but maybe it is not very easy

**luciash d' being:** some automation like show.tiki.org would be awesome for sure

**Arild Berg:** How long does it take to fire up a Tiki instance, to report a bug?

**Nelson:** The firing up of the instance should be pretty quick, 1 2 min

**Nelson:** 1/2 min

**Nelson:** but you still have to file a bug the usual way

**Arild Berg:** that's good

**Nelson:** and you have to recreate the bug on the test instance

**Karen Stingel:** would it be possible to 'push' Bug examples to tikishow.kstingel.com so we have a perpetual copy of open bugs?

**luciash d' being:** will a mail come "your instance is ready" ?

**Arild Berg:** How many simultanous "test instances" can be run?

**Nelson:** about 100 no problem

**Karen Stingel:** I have trunk, br6, br9 + br10 (andc later, br11) permanently avail

**Arild Berg:** sounds good

**Nelson:** the "your instance is ready mail", probbaly, it is not difficult to have

**Olaf-Michael Stefanov:** why not get your heads together, Geoff with his experience and the Marc-Nelson-Pascal idea

**Olaf-Michael Stefanov:** ... and come up with a join show-site concept

**luciash d' being:** that would of course not reproduce a "conflict of two features" bugs...

**Nelson:** push bug examples to "tikishow.kstingle.com": I don't get the question

**Nelson:** right now the plan is to persist until the bug is open

**Olaf-Michael Stefanov:** "<http://tikishow.kstingle.com/>" is not found?

**Karen Stingel:** at present, the show.tiki.org sites are temporary, so examples are lost ... my sites are permanent, so examples are always availalbe

**luciash d' being:** Karen: afaiu the instance will not close until the bug is closed

**Nelson:** I mean so long as it stays open

**Nelson:** but we can persist it longer

**Arild Berg:** Jonny: the "demo" should remain, until the fix is verified

**luciash d' being:** Karen: the temp ones are demo.tiki.org

**Karen Stingel:** I've looked at examples in the past and they've been gone

**Olaf-Michael Stefanov:** I tend to agree with Geoff. Keeping the fixed bug is good to prevent regressions

**Nelson:** The whole show.tiki.org discussion has a parallel automated testing discussion and the 2 will help support each other

**Nelson:** But one is not dependent on the other

**luciash d' being:** actually +1 for Karen's idea to make it decentralized - like anyone could host his own version of show.tiki.org - same as one can host his own profiles site

**Nelson:** IN order to be cost effective with the testing, the fixed bug needs to be made into a test case, e.g. a selenium (not confirmed that it will be this) case

**Olaf-Michael Stefanov:** show.tiki.org would need to be a site that lets developers reproduce the bug on a site that many developers have access to

**Nelson:** decentralization is interesting, but I am wondering if technically it might be much more work... need to think more and we can discuss

**luciash d' being:** Nelson: sure, that would be next step but lets keep it on mind maybe

**Jean-Marc Libs:** I attended an amazing talk at Fosdem: [https://fosdem.org/2013/schedule/event/testing\\_mediawiki/](https://fosdem.org/2013/schedule/event/testing_mediawiki/)

**Jean-Marc Libs:** But I just looked up the videos, and it's not there 

**luciash d' being:** Nelson: could be used for developing customized tiki sites for clients

**Nelson:** it is planned to be used in "beta" for tiki 11

**luciash d' being:** cool

**Olaf-Michael Stefanov:** +1

**Nelson:** we'll be developing i. There will be a separate bbb held to discuss this soon

**Arild Berg:** How are the different show instances tracked/listed?

**Nelson:** if you have any thoughts it should go to the wiki page

**Karen Stingel:** <https://tiki.org/show.tiki.org>

**Geoff Brickell:** thanks

**Olaf-Michael Stefanov:** nelson: which page, <http://tiki.org/show.tiki.org> ?

**Nelson:** each instance is a unique id, which can be stored in a field in the bug tracker

**Nelson:** <http://tiki.org/show.tiki.org>

**Marc Laporte:** can you hear me?

**Olaf-Michael Stefanov:** to whom does one send a request to set up an instance?

**Nelson:** Marc, I can't hear

**luciash d' being:** nope, Marc

**Olaf-Michael Stefanov:** marc can't be heard, jonny yet

**Olaf-Michael Stefanov:** yes...

**luciash d' being:** Marc, u dropped off of listeners

**Marc Laporte:** ok, brb

**lucias d' being:** perhaps ?

**Jean-Marc Libs:** Sorry guys, need to leave now (gotta meet customers)

**lucias d' being:** i heard some words jonny, but did not got it

**lucias d' being:** bye Jean-Marc

**Olaf-Michael Stefanov:** bye jyhem

**Karen Stingel:** cu jyhem

**Jean-Marc Libs:** /me suggests a refactoring freeze before releases.

**Jean-Marc Libs:** final bye bye now ❌

**Olaf-Michael Stefanov:** perhaps we need a special STAR list to "reward" developers who fix lots of bugs

**lucias d' being:** well, imho it is pretty solid and powerful anyway, despite the bugs

**lucias d' being:** the trackers

**Olaf-Michael Stefanov:** ... an incentive system

**Jonny Bradley:** brb

**Nelson:** hi

**Nelson:** did we lose marc?

**Jonny Bradley:** b

**Olaf-Michael Stefanov:** seems so

**Olaf-Michael Stefanov:** he's off the list

**Nelson:** Anyway, I could talk a bit about testing

**Olaf-Michael Stefanov:** please do!

**Nelson:** One of the things is that Alain (not sure who remembers him)

**Olaf-Michael Stefanov:** I do!

**lucias d' being:** we do, we do not smoke that shit anymore ;)

**Nelson:** he will be on sabbatical from his job (end Mar) and so

**Olaf-Michael Stefanov:** ... that Alain ... does what?

**Olaf-Michael Stefanov:** ... and so he's looking for things to do?

**Nelson:** anyway it coincide with my desparate need to have a better testing infrastructure for our tiki sites

**Nelson:** Of course Alain's knowledge is more at the higher level, but he can help with creating test cases and so on, so long as someone else sets up the infra

**Marc Laporte:** back

**luciash d' being:** great to have u back Marc !

**Geoff Brickell:** yep

**Olaf-Michael Stefanov:** One thing that could really help with better testing sites is an easier ways to copy pages, or even who groups of pages from a prod to a dev site and back

**Karen Stingel:** wb Marc

**Nelson:** So there will be some action on the testing front to have testing...

**Nelson:** Yes marc, you were cut off so I jsut started

**Nelson:** Excellent Geoff

**Olaf-Michael Stefanov:** +1 from me too

**Nelson:** I thihnk

**Nelson:** I would like to push and get infra ready by say July August or something

**Olaf-Michael Stefanov:** Geoff: Do you have your test/control site in 9.x or in several versions (I thought I heard "trunk")?

**Nelson:** and then after taht people can start creating/recording tests

**luciash d' being:** and the show.tiki.org ?

**Nelson:** show.tiki.org will be first

**luciash d' being:** yep, when you think ?

**Nelson:** goal for show.tiki.org is to use it as part of the tiki 11 release process

**luciash d' being:** May/June ?

**Nelson:** yes

**Nelson:** May

**luciash d' being:** great

**Geoff Brickell:** Olaf: I have both trunk(11) and 10 - I've almost completed moving all my production sites to 9

**Nelson:** front end automated testing, in the line of selenium. For example selenium has a firefox plugin that allow you to record a test.

**Nelson:** basically a sequence of clicks and keyboard input and compare what comes back to what is expected

**Nelson:** maybe show.tiki.org can be used for that

**Nelson:** yes

**Nelson:** no, this will not be built into tiki

**Nelson:** becasuse this is front end testing

**Nelson:** browsers

**luciash d' being:** what is a typical test workflow ? does it test only code/syntax errors ? or can it catch security holes, or permission/preference check missing ?

**Nelson:** tiki tests is code testing

**Nelson:** both are important, and not mutually exclusive

**luciash d' being:** alright

**Nelson:** but generally the latest initiaive is on front-end testing

**Marc Laporte:** <https://tiki.org/Testing+Team>

**luciash d' being:** ok next topic: Karen's question ?

**Olaf-Michael Stefanov:** Geoff, but you must have had the same test set for 9.x before you moved your sites off, right?

**Geoff Brickell:** right

**Karen Stingel:** cool .... O seem to be the only one using it at present

**Olaf-Michael Stefanov:** Geoff, so you could contribute your 9.x set right?

**luciash d' being:** yeah, CKEditor4 looks good

**luciash d' being:** did not checked it in trunk yet, but checked the CKEditor demos and links

**Karen Stingel:** possibly I'm the only user because other Devs haven't been aware of it

**luciash d' being:** Karen: yeah, marketing plays big role nowadays

**Karen Stingel:** lp doesn't seem to be here ... but I've noticed that the 'vendor' folder after installing Tiki-trunk seems unnecessarily large ...

**Karen Stingel:** do we need the full Zend package, or would just the librqay be better?

**Karen Stingel:** excuse typos ❌

**luciash d' being:** Karen: well there was always full Zend package, but now it is handled by the composer, maybe it includes more files

**Karen Stingel:** is CKEditor planned to be added to composer.json, or left as an svn external?

**luciash d' being:** Karen: we do not use all Zend stuff but several libs, yes, not sure which ones

**Arild Berg:** maybe the "full" version should be tried, instead of the "standard" download

**Arild Berg:** The standard download is in trunk

**luciash d' being:** <http://ckeditor.com/builder>

**Marc Laporte:** The current CKEditor 4 integration is based on the "Standard" download package. See<http://ckeditor.com/blog/Intro-to-Customizing-CKEditor-4> for more info. One important passage: "The Standard package doesn't include plugins like Alignment, Font Size, Color and a few other typical buttons. Why? Because modern websites predefine those things in CSS to avoid low quality content. Users should not "play around" with formatting. Web standards are increasingly more focused on the semantic information of texts. The Standard CKEditor comes with all the necessary tools to create "good web content". The idea is teaching our users about the best way for a "better web", so we made Standard the default option."

**Karen Stingel:** I'm in process of mapping Zend libs used ❌ ... also possibilities for adopting zf2

**luciash d' being:** hi ❌

**Jonny Bradley:** hi Arild

**luciash d' being:** this is interesting:<http://ckeditor.com/addon/bbcode>

**luciash d' being:** but is 777 lines of code ☒

**Karen Stingel:** multiple talkers .. and everyone whispering ... bk in a sec

**luciash d' being:** we do not have even the Tiki 11 star name yet ;)

**luciash d' being:** wow, 10 days !

**luciash d' being:** could not we just shift the months cycle ?

**Nelson:** other than ckeditor there is not major revamp ongoing is there?

**Nelson:** the thing is that wysiwyg is probably a multiversion transition

**Karen Stingel:** I'm away this afternoon, for around a week

**Nelson:** if we do a quick release now, it is really almost a not very meaningful release, ljust to increment the numbers

**Nelson:** lol

**Karen Stingel:** but since I'm mainly tinkering in comments, being away doesn't matter much ☒

**Marc Laporte:** Pascal will create [demo.tiki.org/wysiwyg-html/](http://demo.tiki.org/wysiwyg-html/) and [demo.tiki.org/wysiwyg-wiki/](http://demo.tiki.org/wysiwyg-wiki/) and maybe [demo.tiki.org/wysiwyg-jison-wiki/](http://demo.tiki.org/wysiwyg-jison-wiki/) so we can have a stable place to show off issues. We make more than one demo sites because the various modes are mutually exclusive and we need a place to show off issues for each.

**luciash d' being:** Karen: we will miss you on IRC ☒

**Arild Berg:** What about: [demo.tiki.org/wysiwyg-jison-html/](http://demo.tiki.org/wysiwyg-jison-html/)?

**Karen Stingel:** luciash: I can always leave it open in Windon't and lurk ;) ... just so you don't feel alone

**Karen Stingel:** ... or maybe so I don't miss anything lol

**luciash d' being:** how do we cope with all the new add-ons of CKEditor4 ?

**luciash d' being:** for example this:<http://ckeditor.com/addon/codemirror>

**luciash d' being:** would not it conflict with our CodeMirror libs ?

**Karen Stingel:** luciash: I'll check that once I get back ... I'm also trying to track any reported conflicts introduced via composer ☒

**luciash d' being:** tiki.ini

**Marc Laporte:** To hard code prefs:<http://doc.tiki.org/System+Configuration>

**luciash d' being:** do we use something special or basicali tiki syntax version of <http://ckeditor.com/demo#bbcode> ?

**luciash d' being:** \*basicaly

**luciash d' being:** \*syntax

**luciash d' being:** for the "Use Wiki syntax in Wysiwyg"

**Karen Stingel:** stepping away briefly ....

**luciash d' being:** <http://ckeditor.com/addons/plugins>

**Nelson:** I always reduce the number of buttoins

**Karen Stingel:** bk

**Marc Laporte:** Please see: [http://dev.tiki.org/tiki-download\\_wiki\\_attachment.php?attId=187](http://dev.tiki.org/tiki-download_wiki_attachment.php?attId=187)

**Karen Stingel:** can I ask an off-topic question?

**luciash d' being:** Karen: go ahead

**Karen Stingel:** is content in /modules/cache safe to delete?

**luciash d' being:** yes

**luciash d' being:** clear all tiki cache should empty that

**Karen Stingel:** cool ... that solves my directory compare issue

**Karen Stingel:** luciash: doesn't work when I'm mirroring SVNtiki to DEVtiki webroot

**Nelson:** but, is it too much to ask for people who are running wysiwyg who have some blocker bugs to upgrade to tiki 11 that it is just not going to be fixed before tiki12?

**Nelson:** let me compare

**luciash d' being:** +10 for rock solid things

**luciash d' being:** :)

**Nelson:** just reduce the buttons problem solved

**luciash d' being:** a bit of self-promotion:<http://tiki.org/blogpost553-Wysiwyg-Editor-Keyboard-Shortcuts-Did-You-Know>

**luciash d' being:** Wysiwyg related ;)

**Jonny Bradley:** nice, thanks Luci! ❌

**Nelson:** right Jonny

**Nelson:** makes sense

**Nelson:** make it a dependency

**Arild Berg:** What about a question at install time? Wysiwyg or wiki mode editor as default?

**Nelson:** nice meeting you all!

**luciash d' being:** Arild: that sounds too specific... we should promote Wiki mode first maybe ;)

**luciash d' being:** you could have lot of questions asked at install times, like you want feature X ? Y ? Z ?

**Arild Berg:** maybe, but I was looking for a WYSIWYG system, when I first tried Tiki

**Arild Berg:** yes, could be more questions at install time

**luciash d' being:** Wysiwyg inserting and storing in Tiki syntax would be ideal

**luciash d' being:** by default

**Arild Berg:** I need html syntax in the database

**Karen Stingel:** how do I add topics to the Webinar wishlist?

**Geoff Brickell:** bye

**Nelson:** I agree with luci

**Nelson:** bye
