When

[Thursday, February 21, 2013 at 19:00:00 UTC time](#) (click for time zone in your city)

What

See [Webinars](#) for a detailed description.

Where

<http://live.tiki.org>

Topics

1st hour quick news

- Explain the rationale for the new Webinar format
- Should we ask for a conference call with SF about [Migrate to Allura?](#) (Jyhem will follow-up with SF)
- 2013-02-05: Pascal, Marc, Alain, Duane and Nick met Fred and the BBB Team in Ottawa. The upcoming version is looking very good. We agreed to organize a TikiFest BigBlueButton in June 2013, and make use of all the new features
- Quick report on [TikiFestMuskoka](#)
 - Introduce [show.tiki.org](#)
 - Karen asks: "quick question: do we still want the 'perpetual' showcase Tikis I've made available @ <http://tikishow.kstingel.com?> "
 - Until the new infra is ready, yes please.
- [CKEditor4](#) has been added to trunk
- (add any topics here)

Second hour, longer topics

- Discussion about [CKEditor4](#)

Chat log

Karen Stingel: Hi Geoff
Marc Laporte: Hi everyone!
Karen Stingel: Hi Marc
Geoff Brickell: evening all
Karen Stingel: or afternoon ☒
Karen Stingel: what about morning Geoff? it's 5 AM tomorrow here
Jean-Marc Libs: evening!
Marc Laporte: <https://tiki.org/February+2013+Webinar>
Daniel Gauthier: Hello all. I'm in listening mode
Luciash d. being: from me
Karen Stingel: +1
Daniel Gauthier: +1
Geoff Brickell: +1
Luciash d. being: btw, do you also get some audio loss ?
Luciash d. being: bts here and there
Jean-Marc Libs: I like it, especially as I need to leave in an hour ☒
Karen Stingel: I seem to be getting a little, I just turned up headphones
Geoff Brickell: sound is good fro me
Luciash d. being: great
Karen Stingel: quick question: do we still want the 'perpetual' showcase Tikis I've made available
@http://tikishow.kstingel.com?
Marc Laporte: Kar ☒ ok, I will add to the list for later
Karen Stingel: hope can't hear a thing :)
Luciash d. being: I haven't seen any Allura problem so far recently
Marc Laporte: Whem. T
Luciash d. being: Jean-Marc: just use http
Luciash d. being: instead https
Luciash d. being: but it is not asking me for sf password anymore anyway, just needed it to insert once and now it somehow remembers.
Luciash d. being: I did several commits already and no ask for password
Luciash d. being: *several
Luciash d. being: http does not need any password - it is just checkout - one way
Luciash d. being: no commit access
Luciash d. being: I mean if you are just updating some sites, you should not need commit access there
Luciash d. being: so just use http
Karen Stingel: you update via SVN to a live server, you only need http access
Marc Laporte: you only need https when accessing to commit fixes and stuff
Luciash d. being: <https://tiki.org/Migrate+to+Allura>
Luciash d. being: works for me so I do not need to contact SF to discuss Allura :)
Jean-Marc Libs: For the record, the one that works for me consistently is the following:
`svn switch --relocate https://tikiwiki.svn.sourceforge.net/svnroot/tikiwiki/branches/6.x`
`https://svn.code.sf.net/p/tikiwiki/code/branches/6.x .`
Jean-Marc Libs: (note the "." at the end
Jean-Marc Libs:)
Luciash d. being: yay!
Luciash d. being: yay! what Flash I ☒
Marc Laporte: <http://www.bluebutton.org/blog/>
Karen Stingel: Jules hopes nobody uses IE6 any more ☒
Luciash d. being: anybody here logged in to BBB with IE6 ? ;)
Karen Stingel: Chrome here (FF hates it)
Guest: omstefanov: Chrome here too
Luciash d. being: FF win 7 here
Luciash d. being: (it is just quicker than my favorite Linux box ;))
Jean-Marc Libs: For the record, I have a sore throat today so resting my voice. Will be typing more than talking ☒
Geoff Brickell: e're XP here
Wird Berg: Hi everybody
Marc Laporte: Quick report on TikiFastMuskoka
Marc Laporte: <http://tiki.org/TikiFastMuskoka>
Marc Laporte: <http://tiki.org/Admins+Team#Essentials>
Jean-Marc Libs: and let's make sure the list remains short ☒
Marc Laporte: <http://tiki.org/Teams>
Nelson: Hi Everybody - I have a sore throat today so resting my voice. Will be typing more than talking ☒
Luciash d. being: hi Nelson
Greg Martin: Good thinking there Marc, et al
Jonny Bradley: all sounds good Marc, thanks
Luciash d. being: why there is no Join/Leave button for Quality, Security and Legal team ?
Marc Laporte: <http://tiki.org/Featured+Tikis>
Marc Laporte: <http://tiki.org/Consulting+Team>
Luciash d. being: <http://tiki.org/>
Nelson: Yes Geoff, since you are one of the more prominent consultants, esp across the atlantic would be great to have your input and participation
Marc Laporte: Nelson: can you explain <http://tiki.org/show.tiki.org> next
Nelson: My throat is really bad today
Jean-Marc Libs: admin & security have mailing lists
Jean-Marc Libs: not sure people can send mails to them
Luciash d. being: Jean-Marc: I think they are not mailing lists, just aliases/forwarders distributed to several people
Luciash d. being: ppl can send mail to the address

Nelson: Also, the whole bug reproduction process, whether release or not is not easy to do a lot of time.
Luciash d being: (me trying catch up to stay up-to-date at all his tiki instances maintained :-p
Nelson: I thought quick way to create bug reproduce/test profile would be great
Luciash d being: via tiki profiles. I thought, but maybe it is not very easy
Nelson: some automation like show.tiki.org would be awesome for sure
Karen Stinger: How long does it take to fire up a tiki instance, to report a bug?
Nelson: The firing up of the instance should be pretty quick, 1-2 min
Luciash d being: but you still have to file a bug the usual way
Nelson: for that you have to recreate the bug on the test instance
Karen Stinger: would it be possible to push Bug examples to tikishow.kstingel.com so we have a perpetual copy of open bugs?
Luciash d being: will a mail come "your instance is ready" ?
Nelson: How many simultaneous "test instances" can be run?
Nelson: about 100 no problem
Karen Stinger: I have trunk, br6, br9 + br10 (andc later, br11) permanently avail
Nelson: sounds good
Luciash d being: your instance is ready mail" probbaly, it is not difficult to have
Olaf-Michael Stefanov: why not get your heads together, Geoff with his experience and the Marc-Nelson-Pascal idea
Nelson: that would of course reproduce a "conflict of two features" bugs...
Nelson: but bug examples to persist until the bug is open
Olaf-Michael Stefanov: I don't get the question
Karen Stinger: at present, the show.tiki.org sites are temporary, so examples are lost ... my sites are permanent, so examples are always available
Luciash d being: Karen, afraid the instance will not close until the bug is closed
Nelson: mean so long as it stays open
Nelson: but we can persist it longer
Nelson: Jonny, the "demo" should remain, until the fix is verified
Luciash d being: Karen, the temp ones are demo.tiki.org
Karen Stinger: I've looked at examples in the past and they've been gone
Olaf-Michael Stefanov: I tend to agree with Geoff, keeping the fixed bug is good to prevent regressions
Nelson: The whole show.tiki.org discussion has a parallel automated testing discussion and the 2 will help support each other
Luciash d being: But one is not dependent on the other
Nelson: actually +1 for Karen's idea to make it decentralized - like anyone could host his own version of show.tiki.org - same as one can host his own profiles site
Nelson: IN order to be cost effective with the testing, the fixed bug needs to be made into a test case, e.g. a selenium (not confirmed that it will be this) case
Olaf-Michael Stefanov: show.tiki.org would need to be a site that lets developers reproduce the bug on a site that many developers have access to
Nelson: decentralization is interesting, but I am wondering if technically it might be much more work... need to think more and we can discuss
Luciash d being: Nelson, sure that would be next step but lets keep it on mind maybe
Nelson: I attended an amazing talk at Fosdem: https://fosdem.org/2013/schedule/event/testing_mediawiki/
Nelson: but I just looked up the videos and it's not there
Nelson: Nelson could be used in "beta" for tiki 11
Luciash d being: cool
Olaf-Michael Stefanov: +1
Nelson: we'll be developing. There will be a separate bbb held to discuss this soon
Nelson: How are the different show instances tracked/listed?
Nelson: If you have any thoughts it should go to the wiki page
Karen Stinger: <https://tiki.org/show.tiki.org>
Nelson: thanks
Olaf-Michael Stefanov: nelson: which page <http://tiki.org/show.tiki.org> ?
Nelson: each instance is a unique id, which can be stored in a field in the bug tracker
Nelson: <http://tiki.org/show.tiki.org>
Olaf-Michael Stefanov: to whom does one send a request to set up an instance?
Nelson: Marc, I can't hear
Luciash d being: nope, Marc
Olaf-Michael Stefanov: marc can't be heard, jonny yet
Olaf-Michael Stefanov: yes
Luciash d being: Marc, u dropped off of listeners
Nelson: ok, brb
Luciash d being: perhaps ?
Nelson: need to leave now (gotta meet customers)
Luciash d being: heard some words Jonny, but did not got it
Luciash d being: bye Jean, Marc
Olaf-Michael Stefanov: bye Jyhem
Karen Stinger: cu Jyhem
Jean-Marc Flips: I'm suggests a ref-toring freeze before releases.
Olaf-Michael Stefanov: final bye-bye now
Luciash d being: well, jinn, it is pretty solid and powerful anyway, despite the bugs
Olaf-Michael Stefanov: ... an incentive system
Nelson: brb
Nelson: did we lose marc?
Nelson: brb
Olaf-Michael Stefanov: seems so
Nelson: he's off the list
Olaf-Michael Stefanov: he's off the list
Nelson: Anyway, I could talk a bit about testing
Olaf-Michael Stefanov: please do
Nelson: One of the things is that Alain (not sure who remembers him)
Olaf-Michael Stefanov: I do
Nelson: he will be on sabbatical from his job (end Mar) and so
Olaf-Michael Stefanov: ... and so he's looking for things to do?
Nelson: anyway it coincide with my desperate need to have a better testing infrastructure for our tiki sites
Nelson: Of course Alain's knowledge is more at the higher level, but he can help with creating test cases and so on, so long as someone else sets up the infra
Nelson: back
Luciash d being: great to have u back Marc !
Nelson: yes
Olaf-Michael Stefanov: One thing that could really help with better testing sites is an easier ways to copy pages, or even who groups of pages from a prod to a dev site and back
Karen Stinger: who, Marc
Nelson: so there will be some action on the testing front to have testing...
Nelson: ES: marc, you were cut off so I jsut started
Nelson: xCellar, Geoff
Olaf-Michael Stefanov: +1 from me too
Nelson: I would like to push and get infra ready by say July/August or something
Olaf-Michael Stefanov: Geoff, do you have your test/control site in 9.x or in several versions (I thought I heard "trunk")?
Nelson: and then after that people can start creating/recording tests
Luciash d being: and the show.tiki.org ?
Nelson: show.tiki.org will be first
Nelson: when you think ?
Nelson: goal to show tiki.org is to use it as part of the tiki 11 release process
Luciash d being: May/June ?
Nelson: yes
Luciash d being: great
Nelson: yes
Geoff Brickell: Olaf, have both trunk(11) and 10 - I've almost completed moving all my production sites to 9
Nelson: front end automated testing, in the line of selenium. For example selenium has a firefox plugin that allow you to record a test.
Nelson: basically, a sequence of clicks and keyboard input and compare what comes back to what is expected
Nelson: maybe show.tiki.org can be used for that
Nelson: yes
Nelson: no, this will not be built into tiki
Nelson: because this is front end testing
Nelson: browsers

lucias d' being: what is a typical test workflow ? does it test only code/syntax errors ? or can it catch security holes, or permission/preference check missing ?

Nelson: tiki tests its code testing

lucias d' being: both are important, and not mutually exclusive

lucias d' being: alright

Marc Laporte: but generally the latest initiative is on front-end testing

lucias d' being: <https://tiki.org/Testing+Learn>

lucias d' being: ok next topic: Karen's question ?

Geoff Michael Stepanov: Geoff, but you must have had the same test set for 9.x before you moved your sites off, right?

Geoff Michael Stepanov: right

lucias d' being: O seem to be the only one using it at present

lucias d' being: yeah, CKEditor 4 you could contribute your 9.x set right?

lucias d' being: did not check for trunk yet, but checked the CKEditor demos and links

Karen Stinger: possibly I'm the only user because other Devs haven't been aware of it

lucias d' being: Karen: yeah, marketing plays big role nowadays

Karen Stinger: it doesn't seem to be here ... but I've noticed that the 'vendor' folder after installing Tiki-trunk seems unnecessarily large

Karen Stinger: do we need the full Zend package, or would just the libqay be better?

lucias d' being: Karen: well there was always full Zend package, but now it is handled by the composer, maybe it includes more files

Karen Stinger: is CKEditor planned to be added to composer.json, or left as an svn external?

lucias d' being: Karen: we do not use all Zend stuff, but several libs, yes, not sure which ones

lucias d' being: maybe the full version should be tried, instead of the "standard" download

Arlo Berg: The standard download is in trunk

lucias d' being: <http://ckeditor.com/builder>

Marc Laporte: The current CKEditor 4 integration is based on the "Standard" download package.

See <http://ckeditor.com/blog/Intro-to-Customizing-CKEditor-4> for more info. One important passage: "The Standard package doesn't include plugins like Alignment, Font Size, Color and a few other typical buttons. Why? Because modern websites predefine those things in CSS to avoid low quality content. Users should not "play around" with formatting. Web standards are increasingly more focused on the semantic information of texts. The Standard CKEditor comes with all the necessary tools to create "good web content". The idea is teaching our users about the best way for a "better web", so we made Standard the default option"

Karen Stinger: in the process of mapping Zend libs used ... also possibilities for adopting zf2

lucias d' being: in IRC

lucias d' being: this is interesting: <http://ckeditor.com/addon/bbcode>

Karen Stinger: but is 777 lines of code

lucias d' being: multiple talkers and everyone whispering ... bk in a sec

lucias d' being: we do not have even the Tiki 11 star name yet ;)

lucias d' being: would it be possible to shift the months cycle ?

Nelson: other than CKEditor there is not major revamp ongoing is there?

Nelson: one thing is that wysiwyg is probably a major revision transition

Karen Stinger: if we do a quick release now, it is really almost a not very meaningful release, I just to increment the numbers

Karen Stinger: but since I'm mainly tinkering in comments, being away doesn't matter much

Marc Laporte: Pascal will create demo.tiki.org/wysiwyg-html/ and demo.tiki.org/wysiwyg-wiki/ and maybe

demo.tiki.org/wysiwyg-jison-wiki/ so we can have a stable place to show off issues. We make more than one demo sites because the various modes are mutually exclusive and we need a place to show off issues for each.

lucias d' being: Karen: we will miss you on IRC

Arlo Berg: what about: demo.tiki.org/wysiwyg-jison-wiki/?

Karen Stinger: lucias: I can always leave it open in Window'n and lurk ;) ... just so you don't feel alone

lucias d' being: or maybe so I don't miss anything lol

lucias d' being: how do we cope with all the new add-ons of CKEditor4 ?

lucias d' being: for example this: <http://ckeditor.com/addon/codemirror>

Karen Stinger: would not conflict with our CodeMirror libs ?

lucias d' being: I'll check that once I get back ... I'm also trying to track any reported conflicts introduced via composer

lucias d' being: tiki.ini

lucias d' being: do we use something special or basicall tiki syntax version of <http://ckeditor.com/demo#bbcode> ?

lucias d' being: *basicaly

lucias d' being: for the "Use Wiki syntax in Wysiwyg"

lucias d' being: stepping away briefly

lucias d' being: <http://ckeditor.com/addons/plugins>

lucias d' being: please see: http://dev.tiki.org/tiki-download_wiki_attachment.php?attId=187

lucias d' being: can I ask an off-topic question?

Karen Stinger: yes

lucias d' being: content in /modules/cache safe to delete?

lucias d' being: yes

lucias d' being: clear all tiki cache should empty that

lucias d' being: cool ... that solves my directory compare issue

Nelson: but, is it too much to ask for people who are running wysiwyg who have some blocker bugs to upgrade to tiki 11

that it is just not going to be fixed before tiki12?

lucias d' being: let me compare

lucias d' being: +10 for rock solid things

lucias d' being: just reduce the buttons problem solved

lucias d' being: a bit of self-promotion: <http://tiki.org/blogpost553-Wysiwyg-Editor-Keybord-Shortcuts-Did-You-Know>

lucias d' being: wysiwyg related

lucias d' being: nice, thanks Luci

lucias d' being: right yonny

Nelson: makes sense

Arlo Berg: what about a question at install time? Wysiwyg or wiki mode editor as default?

lucias d' being: nice meeting you all

lucias d' being: Arlo: that sounds too specific ... we should promote Wiki mode first maybe ;)

lucias d' being: yes, you could have lot of questions asked at install times, like you want feature 'X' ? Y ? Z ?

lucias d' being: maybe, but I was looking for a Wysiwyg system, when I first tried Tiki

lucias d' being: maybe could be more questions at install time

lucias d' being: wysiwyg inserting and storing in tiki syntax would be ideal

lucias d' being: by default

lucias d' being: I need html syntax in the database

Karen Stinger: how do I add topics to the Webinar wishlist?

Geoff Brickell: bye

Nelson: agree with luci

Nelson: bye
